

HID

Metal Halide (MH) lamps are characterized by a white light, a long life, and are suitable for both indoor and outdoor applications. Ceramic Metal Halide (CMH) lamps combine the white light of metal halide with the added benefit of a high CRI. CMH lamps are an energy efficient alternative to halogen lamps!

Lamps must be operated in their specified operating positions in order to maximize lamp performance and life. An Incorrect Incorrect operating positions may also lead to lamp rupture.

HID systems do not have any ceiling height restrictions and can be used in a wide variety of applications. HID lamps will perform equally well and maintain light output in both cold and warm applications.
